TRACK TANKS
INSTALLATION and PARTS MANUAL

INSTALLATION & PARTS

Limited Warranty

Fast Ag Solutions warrants to the buyer that the new machinery is free from defects in material and workmanship.

This warranty is only effective as to any new machinery which has not been altered, changed, repaired or treated since its delivery to the buyer, other than by Fast Ag Solutions or its authorized dealers or employees, and does not apply to accessories, attachments, tools or parts, sold or operated with the new machinery, if they have not been manufactured by Fast Ag Solutions.

Fast Ag Solutions shall only be liable for defects in the materials or workmanship attributable to faulty material or bad workmanship that can be proved by the buyer, and specifically excludes liability for repairs arising as a result of normal wear and tear of the new machinery or in any other manner whatsoever, and without limiting the generality of the foregoing, excludes application or installation of parts not completed in accordance with this operator's manual, specifications, or printed instructions.

Written notice shall be given by registered mail, to the Manufacturer within seven (7) days after the defect shall have become apparent or the repairs shall have become necessary, addressed as follows:

Fast Ag Solutions
4130 Commerce Boulevard
Windom, MN 56101

This warranty shall expire one (1) year after the date of delivery of the new machinery.

If these conditions are fulfilled, Fast Ag Solutions shall at its own cost and at its own option either repair or replace any defective parts provided that the buyer shall be responsible for all expenses incurred as a result of repairs, labor, parts, transportation or any other work, unless Fast Ag Solutions has authorized such expenses in advance.

The warranty shall not extend to any repairs, changes, alterations, or replacements made to the new equipment other than by Fast Ag Solutions or its authorized dealers or employees.

This warranty extends only to the original owner of the new equipment.

Rubber parts (including tires, hoses, grommets) are not warrantied.

This warranty is limited to the terms stated herein and is in lieu of any other warranties whether express or implied, and without limiting the generality of the foregoing, excluded all warranties, express or implied or conditions whether statutory or otherwise as to quality and fitness for any purpose of the new equipment. The Manufacturer disclaims all liability for incidental or consequential damages.

This Track Tanks is subject to design changes and Fast Ag Solutions shall not be required to retrofit or exchange items on previously sold units except at its own option.

Warranty void if not registered.

Parts information in this manual represents components installed when product was manufactured based upon the best available information. Modifications made subsequent to initial delivery are not included. Always verify the parts and color required when ordering parts.

If you have any questions, please contact your Fast Ag Solutions Parts and Service Department.

Explanation of Lists

The Manual is organized as follows:

Table of Contents

INSTALLATION

PARTS

TORQUE SPECIFICATIONS

The parts lists are broken down into sub-assemblies and listed in four (4) columns:

- **ITEM** - These numbers are found on the illustration associated with the parts list.
 - NS - This item is NOT SHOWN, included for reference.
- **QTY.** - This is the quantity of parts needed in an assembly.
 - AR - The quantity of this item is applied AS REQUIRED for the location.
- **PART NO.** - These are the part numbers associated with the ITEM.
- **DESCRIPTION** - This is the description of the part.

DISASSEMBLY

Remove Step Assembly and LH Turn Signal

⚠ WARNING: Step assembly weighs approximately 300 lbs. Use an appropriate lifting device to prevent injury.

1. Raise the tractor's hood and remove its side panels.
2. Unplug the connectors for the Step Actuator and front-left turn signal (if equipped.) Save for future use.
3. Loosen the four set bolts (1) securing the Step Assembly to the ladder mount tubes.

4. Attach a lifting device to the step assembly.
5. Remove the Step Assembly and save for future use.
6. Remove the four M19 head bolts (2) retaining the ladder mount tube (3). Remove and discard all.

7. Repeat this process for the bolts (4) and lower step tube (5).

Remove RH Turn Signal and Exhaust Components

Figure 1: Inside the Left Frame Rail

1. Unplug the connector for the front-right turn signal.
2. Remove the three bolts retaining the right turn signal and bracket. Save for future use.
3. Remove eight M10 head bolts (1) from the DEF Pump Cover plates.
4. Remove the four M16 head bolts (2) securing the DEF Pump (3) to the tractor's frame. Use a bungee cord to suspend the DEF Pump and prevent stressing the DEF Pump hose.

Remove the Radar Sensor and Deflector Plate

1. Unplug the Radar Sensor's connector (1).
2. Remove the three M10 head bolts (3) securing the Radar Sensor (2). Save for future use.

3. Remove the four M19 head bolts securing the Deflector Plate (4). Save for future use.

INSTALLATION

Install Receiver Mounting Brackets

⚠ WARNING: Mounting bracket weighs approximately 75 lbs. Use an appropriate lifting device to prevent injury.

1. Install the left-side mounting bracket (1) on the tractor with 3/4" x 2" GR8 bolts (2) and flange nuts. Refer to the [torque charts](#) in this Manual for bolt torque values.

2. Repeat Step 1 with the right-side mounting bracket (3).

3. Place the rubber isolators (4) on the top and bottom of the bracket.
4. Place the plate (5) on top of the isolator and insert four 3/4" x 9" GR5

bolts (6) through the plate and both isolators.

5. Repeat Steps 3 and 4 for the left-hand side receiver mounting bracket.

⚠ WARNING: Receiver mounting tube weighs approximately 150 lbs. Use an appropriate lifting device to prevent injury.

6. Raise and center the receiver mounting tube (7) into position with the radar bracket to the rear and install eight center-lock nuts (8).

7. Tighten all eight bolts equally (1/8" – 1/4") so some bulge is seen on the rubber isolators.
8. Reinstall the DEF Pump and Cover.

Install Radar

1. Attach the radar (3) to its FAST mounting bracket (1) with existing hardware (2).
2. Radar calibration may be necessary.

Install Rear Tank Supports

1. Install the right-hand tank mount (1) with three M16 x 40mm GR8.8 flange bolts (2). Refer to the [torque charts](#) in this Manual for bolt torque values.
2. Install the rubber isolator (3) with three 1/2" x 1-3/4" bolts (4), 1/2" washers, and center-lock nuts. Snug the bolts to slightly compress the rubber.

3. Repeat the procedure for the left-hand side.

Position the Tractor and Tanks

⚠ WARNING: Each tank weighs approximately 1100 lbs. Use an appropriate lifting device to prevent injury.

1. Raise the front of the tractor with an appropriate lifting device (1).
 - a. The suspension should be at maximum travel upwards, i.e., the front of the tracks should almost come off the ground.
 - b. This is meant to create clearance between the exhaust bracket casting and the suspension hard-bar.
2. Connect an appropriate lifting device to the right-hand tank.
3. Raise the tank (2) and guide it into position onto its support bracketry.

Install Underside Supports

⚠ WARNING: Frame bracketry weighs approximately 300 lbs. Use an appropriate lifting device to prevent injury.

1. Install the right-hand underside support (2) onto the receiver mounting bracket (1) with four 3/4" x 2-1/2" GR8 flange bolts (3) and flange nuts and four 3/4" x 2" GR8 flange bolts (4) and flange nuts. Refer to the [torque charts](#) in this Manual for bolt torque values.

2. Add the intermediary bolt bracket (5) to the right-hand underside support (2). Position it with four 3/4" x 2" GR8 flange bolts and flange nuts (6). Do not tighten them yet.

3. Repeat the procedure for the left-hand side.
4. Align the tank receiver with the underside support and install ten 3/4" x 2" GR8 flange bolts (7) with flange nuts and two 1/2" x 5-1/2" bolts, washers, and nuts (8).
5. Tighten all fasteners. Refer to [torque charts](#) in this instruction set for bolt torque values.

6. Repeat the procedure with the left-hand tank (9).

7. Disconnect the lifting devices.

Install Straps and Nylon Protector

1. Position the straps (1) into place and insert its studs through the holes in the tank supports. Install one each 3/8" x 1" G5 bolts and nuts (2) and 1/2" flange nut (3).

2. Repeat the procedure on the left-hand side.

Install Step Assembly

⚠ WARNING: Step assembly weighs approximately 300 lbs. Use an appropriate lifting device to remove step assembly.

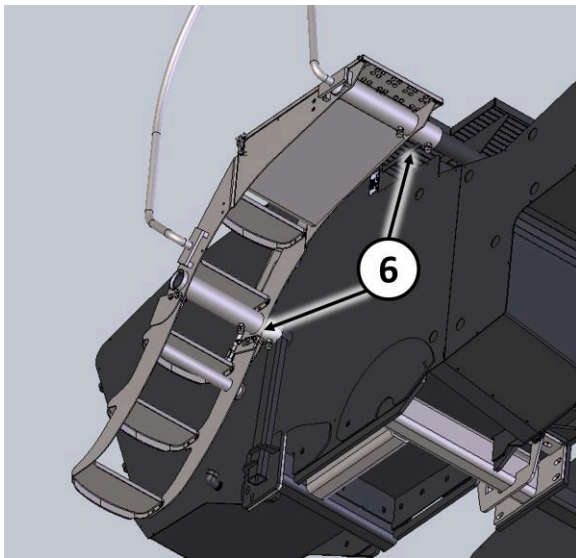

1. Install the top bracket platform (1) onto the tractor above the left-hand tank with existing hardware (2).

2. Install the base step (3) with four 5/8" x 2" GR8 flange bolts and flange nuts (4). Refer to [torque charts](#) in this instruction set for all bolt torque values.

3. Attach a lifting device to the Step Assembly.
4. Install the step assembly (5) as shown into its receiver and tighten its setscrews (6).

Install Plumbing Components

1. Install all plumbing components as shown in the [PARTS](#) section(s).

5. Install the [barrier chain](#) between the Step Assembly and the existing platform's rails.

TORQUE SPECIFICATIONS

Check the tightness of ALL BOLTS, U-BOLTS, and CAP SCREWS after the first 10-15 hours of operation and again at end of the first week (50 hours) of operation. Tighten all bolts to torques specified unless otherwise noted. Check tightness of hardware periodically.

Torque values listed are for general use only, based on the strength of the bolt or screw. DO NOT use these values if a different torque value or tightening procedure is given for a specific application. For stainless steel fasteners or for nuts on U-bolts, see the tightening instructions for the specific application. Tighten plastic insert or crimped steel type lock nuts by turning the nut to the dry torque shown in the chart, unless different instructions are given for the specific application.

Shear bolts are designed to fail under predetermined loads. Always replace shear bolts with identical property class. Replace fasteners with the same or higher property class. If higher property class fasteners are used, tighten these to the strength of the original. Make sure fastener threads are clean and that you properly start thread engagement. When possible, lubricate plain or zinc plated fasteners other than lock nuts, wheel bolts, or wheel nuts, unless different instructions are given for the specific application.

¹ "Lubricated" means coated with a lubricant such as engine oil, fasteners with phosphate and oil coatings, or M20 and larger fasteners with JDM F13C, F13F or F13J zinc flake coating.

² "Dry" means plain or zinc plated without any lubrication, or M6 to M18 fasteners with JDM F13B, F13E or F13H zinc flake coating.

Figure 3: Common imperial bolt grade markings

Unified Inch Bolt and Screw Torque Values

Screw Size	SAE Grade 1				SAE Grade 2 ³				SAE Grade 5, 5.1 or 5.2				SAE Grade 8 or 8.2			
	Lubricated ⁴		Dry ⁵		Lubricated ⁴		Dry ⁵		Lubricated ⁴		Dry ⁵		Lubricated ⁴		Dry ⁵

Torque values listed are for general use only, based on the strength of the bolt or screw. DO NOT use these values if a different torque value or tightening procedure is given for a specific application. For plastic insert or crimped steel type lock nuts, for stainless steel fasteners, or for nuts on U-bolts, see the tightening instructions for the specific application.
 Shear bolts are designed to fail under predetermined loads.
 Always replace shear bolts with identical grade.

Replace fasteners with the same or higher grade. If higher grade fasteners are used, tighten these to the strength of the original. Make sure fastener threads are clean and that you properly start thread engagement. When possible, lubricate plain or zinc plated fasteners other than lock nuts, wheel bolts, or wheel nuts, unless different instructions are given for the specific application.

³ Grade 2 applies for hex cap screws (not hex bolts) up to 6 in. (152 mm) long. Grade 1 applies for hex cap screws over 6 in. (152 mm) long, and for all other types of bolts and screws of any length.

⁴ "Lubricated" means coated with a lubricant such as engine oil, fasteners with phosphate and oil coatings, or 7/8 in. and larger fasteners with JDM F13C, F13F or F13J zinc flake coating.

⁵ "Dry" means plain or zinc plated without any lubrication, or 1/4 to 3/4 in. fasteners with JDM F13B, F13E or F13H zinc flake coating.
